## Company Reference – Building Solutions Brisbane

To whom it may concern,

Formula Interiors engaged Building Solutions Brisbane to complete the slab strengthening package on a recent fit out project. The works involved floor & soffit slab surface preparation, slab crack injection, installation of the carbon fibre strengthening strip grid layout, and engineering 'pull off' testing at completion. The slab strengthening works covered over 300m<sup>2</sup> of floor area.

The Building Solutions Brisbane team, led by Ben Donnelly, successfully completed these works on a very compressed timeframe. They were always very professional in their conduct onsite, with attention to detail, quality, and safe work procedures. Building Solutions Brisbane communicated very well with Formula, and the project structural engineer, assisting with the process of necessary scope adjustment, in order to align with the existing site conditions. Building Solutions Brisbane also provided regular photographic site reports to keep all stakeholders up to date with the progression of the works.

I would have no issue in recommending Building Solutions Brisbane for future slab strengthening engineering projects, and look forward to working with them again.

Regards,

Troy Thorley
